Installation example parking deck drain Ecoguss

The Elbphilharmonie Hamburg has not only established itself within a very short time frame as an outstanding concert hall, but has also established itself as an architectural beacon project developed with enormous attraction. In the integrated multi-storey car park of the building 30 parking deck drains made of the highly efficient composite material Ecoguss for a reliable Soil drainage - even in areas with vehicle traffic. From there you can reach via elevator the entrance area on the ground floor and can enjoy your visit.

Selection Criteria

- High resistance, even to aggressive wastewater
- Reliable drainage of the wastewater produced
- Compliance with all relevant fire protection and sound insulation requirements
- Can be used in trafficable areas

Products Used In Reference Object

- Parking deck drain
