Slovakia has been a member of the European Union since 2004. While high-ranking meetings are held at the Ministry of Foreign and European Affairs and important decisions are made on the course for cross-border cooperation, KESSEL drainage solutions perform their work reliably and unobtrusively underground.

### Selection Criteria

- Reliable drainage of the wastewater produced
- Innovative chamber system for a wide range of different installation depths
- Combines the safety of lifting stations with the advantages of backwater valves
- Quiet, energy-saving operation achieved by using the natural gradient to the sewer
- Reliable backwater protection
